

HOW TO EXPLAIN QUANTIFICATION OF PROJECT OUTCOMES ?

Can you explain how your project helped achieve a 5% performance boost?"

And what about the 10% projected revenue growth? How did you come to that conclusion?

I'm also curious about the 20% data-related expense reduction. How was that figure estimated?

CAN YOU EXPLAIN HOW YOUR PROJECT HELPED ACHIEVE A 5% PERFORMANCE BOOST?

The 5% performance boost was a projected outcome based on the optimization techniques I applied to the dashboard.

During the course project, I focused on optimizing the data model using DAX Studio, which improved the dashboard's loading and interaction speed.

I identified and eliminated redundant calculations and optimized the measures for better performance.

Although this was a simulation, in a real-world scenario, such optimizations could lead to a similar performance boost by reducing report generation time and enhancing user experience.

Q

A

WHAT ABOUT THE 10% PROJECTED REVENUE GROWTH? HOW DID YOU COME TO THAT CONCLUSION?

The 10% revenue growth projection was derived from the data analysis and insights we generated.

By analyzing sales trends and performance metrics, I identified opportunities for increasing sales in underperforming categories and optimizing the product mix.

For example, focusing on high-margin products with growing demand could potentially increase revenues.

In a real business environment, implementing these insights could lead to a similar increase in revenue by targeting the right customer segments and improving sales strategies.

Q
A

ABOUT THE 20% DATA-RELATED EXPENSE REDUCTION. HOW WAS THAT FIGURE ESTIMATED?

That figure was estimated by examining the cost-saving opportunities within the dataset provided in the course.

Through the project, I learned to streamline data processes, such as automating data collection and reporting, which would reduce the need for manual intervention.

Also, by creating more accurate and focused reports, a company could make more informed decisions, potentially reducing wastage and unnecessary expenses.

IMPRESSION

You're showing that you understand the underlying principles and can apply analytical thinking to create value.

You're also being clear that these were projected outcomes based on a course exercise, which shows honesty and integrity.
